JOURNAL OF ELECTRON SPECTROSCOPY and Related Phenomena

Subject index

Accuracy
The ab initio calculation of very many triply ionized states of molecular systems 109
Adsorbate
On the origin of core-level binding energy shifts 209
Adsorbate–substrate bonding
Adsorbate–substrate bonding and dynamics as determined by SEXAFS 149
Advanced light source
New developments in soft X-ray monochromators for third generation synchrotron radiation sources 9
Algebraic diagrammatic construction approximation
The ab initio calculation of very many triply ionized states of molecular systems 109
Alloy
On the origin of core-level binding energy shifts 209
Ammonia
High resolution studies of the fragmentation of condensed ammonia and methane by core excitations using electron and ion emission techniques 161
Angle-resolved photoemission spectroscopy
Fermi surface studies using angle-resolved photoemission 175
Angular distribution
A new method for the investigation of the angular distribution of photoelectrons from laser-aligned core-excited atoms 61
Anisotropy
X-ray magnetic circular dichroism spectroscopy of transition metal thin films 253
Application
Applications of ZEKE spectroscopy 35
Auger decay
Dynamical behavior of electronic states of NH_3^{2+} prepared from N1s ionization of ammonia 83
Auger resonance Raman effect
High resolution core electron spectroscopy of atoms and molecules on the Finnish beamline at the MAX laboratory 67

Carbon monoxide
Relaxation effects in C1s photoionisation of CO: a high resolution photoelectron study in the near-threshold region 97
Chemical shift
On the origin of core-level binding energy shifts 209
Cobalt
Spin polarized photoemission studies of the 3s core levels in Fe and Co 245
Coincidence
Core level photoionization–decay coincidence spectroscopy of free molecules 47
Core hole excitation–emission dynamics
Core level photoionization–decay coincidence spectroscopy of free molecules 47
Core-level binding energy shift
Core level binding energy shifts in interfaces between 4d and alkali metals 225
Core-level photoelectron spectroscopy
On the origin of core-level binding energy shifts 209
Core-level spectroscopy
High-resolution core-level studies of silicon surfaces 197
Core-to-bound excitation
High resolution studies of the fragmentation of condensed ammonia and methane by core excitations using electron and ion emission techniques 161
Cu(001)
Photoelectron holography: improvements to atom image recovery from experimental data 299
Cu(111)
Quantitative determination of molecular adsorption structures using photoelectron diffraction: the methoxy species 117

Dimer
High-resolution core-level studies of silicon surfaces 197

Electron spectromicroscopy
The development of electron spectromicroscopy 309

Fermi contour
Fermi surface studies using angle-resolved photoemission 175
Fragmentation channel branching ratio
Dynamical behavior of electronic states of NH_3^{2+} prepared from N1s ionization of ammonia 83

Free molecule
Core level photoionization–decay coincidence spectroscopy of free molecules 47

Gd(0001)
4f- and surface-electronic structure of lanthanide metals 233
Group I metal
Core level binding energy shifts in interfaces between 4d and alkali metals 225

Holography
Photoelectron diffraction: new dimensions in space, time, and spin 273
High resolution core electron spectroscopy
High resolution core electron spectroscopy of atoms and molecules on the Finnish beamline at the MAX laboratory 67
High resolution
High-resolution core-level studies of silicon surfaces 197
High-resolution photoemission spectroscopy
4f- and surface-electronic structure of lanthanide metals 233
Holography
Photoelectron holography: improvements to atom image recovery from experimental data 299

Iron
Spin polarized photoemission studies of the 3s core levels in Fe and Co 245

Koopmans level
On the origin of core-level binding energy shifts 209

Lanthanide metal surface
4f- and surface-electronic structure of lanthanide metals 233
Large aromatic molecule
NEXAFS investigations on ordered adsorbate layers of large aromatic molecules 129
Laser
The linac coherent light source (LCLS): a fourth-generation light source using the SLAC linac 1
Laser-aligned core-excited atom
A new method for the investigation of the angular distribution of photoelectrons from laser-aligned core-excited atoms 61
Linac coherent light source
The linac coherent light source (LCLS): a fourth-generation light source using the SLAC linac 1
Low temperature
4f- and surface-electronic structure of lanthanide metals 233

Magnetic moment
X-ray magnetic circular dichroism spectroscopy of transition metal thin films 253
Magnetic multilayers
Quantized electronic states in nanostructures 187
MAX
High resolution core electron spectroscopy of atoms and molecules on the Finnish beamline at the MAX laboratory 67
Metal surface
On the origin of core-level binding energy shifts 209
Methane
High resolution studies of the fragmentation of condensed ammonia and methane by core excitations using electron and ion emission techniques 161
Methoxy species
Quantitative determination of molecular adsorption structures using photoelectron diffraction: the methoxy species 117
Molybdenum
Core level binding energy shifts in interfaces between 4d and alkali metals 225

Nanostructure
Quantized electronic states in nanostructures 187
Near edge X-ray absorption fine structure
NEXAFS investigations on ordered adsorbate layers of large aromatic molecules 129
Near-threshold region
Relaxation effects in C1s photoionisation of CO: a high resolution photoelectron study in the near-threshold region 97
NH_3^{2+}; N1s ionization of ammonia
Dynamical behavior of electronic states of NH_3^{2+} prepared from N1s ionization of ammonia 83
Ni(111)
Quantitative determination of molecular adsorption structures using photoelectron diffraction: the methoxy species 117
Novel
Photoelectron spectroscopy of atoms 23

Ordered absorbate layer
NEXAFS investigations on ordered adsorbate layers of large aromatic molecules 129

Palladium
Core level binding energy shifts in interfaces between 4d and alkali metals 225
Photoelectron diffraction
Photoelectron diffraction: new dimensions in space, time, and spin 273
Photoelectron diffraction
Quantitative determination of molecular adsorption

structures using photoelectron diffraction: the methoxy species 117
Photoelectron spectroscopy
Photoelectron diffraction: new dimensions in space, time, and spin 273
Photoemission spectroscopy
Core level binding energy shifts in interfaces between 4d and alkali metals 225
Rhodium
Core level binding energy shifts in interfaces between 4d and alkali metals 225
Scan rules
X-ray magnetic circular dichroism spectroscopy of transition metal thin films 253
Scanned-angle photoelectron holography
Photoelectron holography: improvements to atom image recovery from experimental data 299
Scanning tunnelling spectroscopy
Quantized electronic states in nanostructures 187
Si(100)2 × 1:As
High-resolution core-level studies of silicon surfaces 197
Si(100)2 × 1:H
High-resolution core-level studies of silicon surfaces 197
Si(100)2 × 1:K
High-resolution core-level studies of silicon surfaces 197
Soft X-ray monochromator
New developments in soft X-ray monochromators for third generation synchrotron radiation sources 9
Spin polarized photoemission spectroscopy
Spin polarized photoemission studies of the 3s core levels in Fe and Co 245
Spin
X-ray magnetic circular dichroism spectroscopy of transition metal thin films 253
Sum rule
Spin polarized photoemission studies of the 3s core levels in Fe and Co 245
Surface extended X-ray absorption fine structure
Adsorbate–substrate bonding and dynamics as determined by SEXAFS 149
Surface structure
Photoelectron diffraction: new dimensions in space, time, and spin 273
Synchrotron radiation zero kinetic energy photoelectron spectroscopy
Applications of ZEKE spectroscopy 35
Synchrotron radiation
A new method for the investigation of the angular distribution of photoelectrons from laser-aligned core-excited atoms 61
Core level photoionization–decay coincidence spectroscopy of free molecules 47
High resolution core electron spectroscopy of atoms and molecules on the Finnish beamline at the MAX laboratory 67
New developments in soft X-ray monochromators for third generation synchrotron radiation sources 9
Photoelectron diffraction: new dimensions in space, time, and spin 273
Photoelectron spectroscopy of atoms 23
Quantized electronic states in nanostructures 187
The ab initio calculation of very many triply ionized states of molecular systems 109
The linac coherent light source (LCLS): a fourth-generation light source using the SLAC linac 1

Thin film
Fermi surface studies using angle-resolved photoemission 175
X-ray magnetic circular dichroism spectroscopy of transition metal thin films 253
Three-particle Green's function
The ab initio calculation of very many triply ionized states of molecular systems 109
Transition metal
X-ray magnetic circular dichroism spectroscopy of transition metal thin films 253
Triply ionized state
The ab initio calculation of very many triply ionized states of molecular systems 109

X-ray absorption spectroscopy
The development of electron spectromicroscopy 309
The development of electron spectromicroscopy 309
X-ray magnetic circular dichroism
X-ray magnetic circular dichroism spectroscopy of transition metal thin films 253
X-ray microscopy
The development of electron spectromicroscopy 309
X-ray photoelectron spectroscopy
The development of electron spectromicroscopy 309

Yb(111)
4f- and surface-electronic structure of lanthanide metals 233
